

Minimum Cable requirements for CCTV Cameras

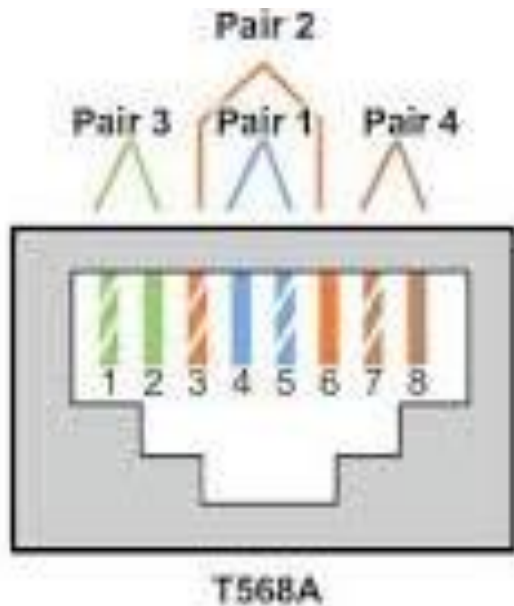

4 CH NVR

Each camera requires 4 cables from the cat5e cable so 2 pairs

8-16 CH NVR

Each camera requires 6 cables from the cat5e cable so 3 pairs

Alternatively you can run the cameras via a PoE switch and the cameras will only require 4 conductors (2 pairs)

4CH – Only requires pins 1,2,3,6

8-16 CH – Requires pins 1,2,3,4,6,8. So in this case it does not use ‘blue white’ or ‘brown white’

If you have a damaged cable, reconfigure using the pins required. Try and keep a twisted pairs across pins 3 and 6

If you require further assistance with camera configurations and cable requirements, please contact technical support at support@dorani.com.au
